

SWAPNIL SURYAWANSHI

Senior Software Engineer

Pune, India | +91-8600755900 | smskycs@gmail.com | Github github.com/swapnil811 | LinkedIn linkedin.com/in/swapnil811

PROFESSIONAL SUMMARY

Senior Software Engineer with **7+ years** of experience designing and building cloud-native backend systems, distributed applications, and Kubernetes-based platforms. Strong expertise in Golang, Python, Kubernetes, Cloud infrastructure, Distributed Systems, Event-driven Architecture. Proven track record in enterprise backup and disaster recovery solutions, Kubernetes Operators, and high-performance microservices, building scalable ETL pipelines. Passionate about writing clean, maintainable code, improving system reliability, and shipping production-grade cloud solutions with leveraging AI assisted Development tools. Summary of relevant experience - Golang 5+ years, Python 5+ years.

TECHNICAL SKILLS

Languages	Golang, Python, SQL, Bash
Backend	REST APIs, Microservices, WebSockets, Middleware, Authentication, API Design
Frameworks	go-restful, Django, Flask, Django REST Framework, Cobra CLI
Kubernetes	Operators, CRDs, Controllers, Admission Webhooks, Helm, RBAC, CSI, Kubebuilder
Cloud & Infra	Red Hat OpenShift, AWS (EKS, EC2, Lambda, S3, EBS, RDS, DynamoDB), Google GKE, Kops
Databases	PostgreSQL, Elasticsearch, MongoDB, Redis, SQLite
Messaging	RabbitMQ, Celery
DevOps & Tools	Docker, Git, GitHub Actions, Jenkins, Nginx, Gunicorn, Bazel
Testing	Unit Testing, Integration Testing, Mocking, Go testing, Ginkgo, E2E Testing
AI Tools	Cursor, Claude

PROFESSIONAL EXPERIENCE

Velotio Technologies Pvt. Ltd. (Now R Systems International Ltd.) <i>Senior Software Engineer</i>	<i>Pune, India</i> <i>Apr 2020 – Present</i>
TrilioVault — <i>Cloud-native backup & disaster recovery platform for Kubernetes workloads</i> Tech: Golang, Kubernetes, Helm, Docker, Bazel, Kubebuilder, OCP, EKS, GKE	<i>Apr 2021 – Present</i>
- Designed and developed cloud-native backend services and high-performance RESTful APIs using Golang and go-restful. - Built Kubernetes Operators using Operator SDK and Kubebuilder with Custom Resource Definitions (CRDs) and reconciliation loops to manage enterprise-scale backup and restore workflows. - Developed Mutating and Validating Admission Webhooks to enforce resource validation and configuration policies across clusters. - Implemented enterprise-grade backup and disaster recovery workflows for stateful Kubernetes applications, working extensively with StatefulSets, PVs, PVCs, and CSI snapshots. - Built Cobra-based CLI plugins to simplify deployment, backup, and operational workflows, improving engineering productivity. - Developed WebSocket-based communication modules for real-time status updates and monitoring dashboards. - Leveraged Go goroutines, channels, contexts, and concurrency patterns to build efficient asynchronous processing pipelines. - Improved application robustness through structured error handling, centralized logging, and retry mechanisms with circuit-breaker patterns. - Built reusable packages and libraries following idiomatic Go design principles and modular architecture.	

- Investigated and resolved complex production issues across Kubernetes clusters (OpenShift, EKS, GKE, Kops), improving platform stability.
- Authored comprehensive unit, integration, and E2E tests, participated in design reviews, code reviews, and Agile sprint planning.
- Automated deployment and configuration management using Helm charts and containerized workloads with Docker.

Sparrow — ERP Platform for manufacturing domain

Nov 2022 – Jan 2026

Tech: Python, Django, PostgreSQL, AWS, Redis, Celery, RabbitMQ

- Worked on the python- Django to create modules like Sales, Purchase, Logistics, Production, Finance etc.
- Used DRF for creating restful api's and JWT tokens for authentication.
- Maintained the api documentation with Swagger.
- Integrated third party API's into the system
- Created template using Django - Jinja
- Perform deployment cycle on AWS - EC2 instance.
- Created RBAC system for authorization.
- Mentoring new members while they start contributing to the project.
- Participated in owning the Epic, dividing the feature into smaller tasks and getting follow ups from assignees to get the feature ready within timeline.

MPL DevOps — Automation platform for Site Reliability Engineering workflows

Jul 2020 – Mar 2021

Tech: Python, Bash, AWS Services, ZooKeeper, Elastalert

- Built Python automation scripts to streamline day-to-day SRE workflows, reducing manual maintenance effort significantly.
- Customized Elastalert to dynamically update alert configuration files via ZooKeeper nodes, enabling centralized alert management for large-scale infrastructure.
- Eliminated repetitive per-node configuration changes, saving SREs several hours per week on alert maintenance.
- Integrated a new alert destination to deliver notifications via the Flock messaging platform.

Sight Machine — Industrial analytics platform for manufacturing data intelligence

Apr 2020 – Jun 2020

Tech: Golang, Python, MongoDB, PostgreSQL, SQL, NumPy, Pandas

- Developed ETL pipelines for ingesting industrial data from heterogeneous sources including SQL databases, CSV files, Excel spreadsheets, and cloud storage.
- Designed transformation workflows for data cleansing, validation, normalization, and enrichment of high-volume manufacturing datasets.
- Built reusable data connectors for multiple input sources, reducing onboarding time for new customer datasets.
- Optimized large-volume data processing and ingestion pipelines into MongoDB, improving pipeline throughput and fault tolerance.

Arham Technosoft Pvt. Ltd.

Ahmedabad, India

Software Engineer

Apr 2019 – Mar 2020

Exchange Connect — Capital markets platform for NSE (National Stock Exchange)

Tech: Python, Django, Flask, PostgreSQL, Elasticsearch, AWS (EC2, S3), RabbitMQ, Celery

- Developed and maintained RESTful APIs using Django REST Framework and Flask for a capital markets platform serving corporates and investors.
- Improved API latency by over 90% — reduced average response time from 30 seconds to under 3 seconds by migrating complex SQL queries to Elasticsearch.
- Leveraged Elasticsearch to power full-text search APIs, delivering significantly faster search results.
- Web-scraped financial news websites to fetch and tag relevant listed companies for real-time news feeds.
- Optimized ORM queries to reduce redundant database calls, further improving backend performance.
- Collaborated closely with the front-end team on API contracts, approach discussions, and integration challenges.

KEY ACHIEVEMENTS

- ✓ **90%+ API latency reduction** — Migrated legacy SQL queries to Elasticsearch, dropping response times from 30s to under 3s.
- ✓ **Enterprise Kubernetes Operators** — Built Operators managing production-grade backup and restore workflows across OpenShift, EKS, and GKE.
- ✓ **SRE automation** — Automated alert configuration management via ZooKeeper, eliminating hours of weekly manual effort for the SRE team.
- ✓ **Reusable CLI tooling** — Built Cobra-based CLI plugins adopted across engineering teams for deployment and operational workflows.

EDUCATION

Bachelor of Engineering (B.E.)

Savitribai Phule Pune University (Pune University)

Amrutvahini college of engineering, Sangamner 2013-2017
